

Rising to the challenge of the future

The P.1127 is a striking example of Hawker Siddeley's pioneering work in new concepts of flight. But this, the world's first V/STOL strike reconnaissance fighter, is no flash in the skies. The Vulcan bomber, the new Trident jetliner and the Argosy freightercoach are among its flying mates.

In rocketry and missiles, too, the Group's achievements are important to Britain and the Free World. Blue Streak, chosen as first-stage space launcher for the European Launcher Development Organisation; Seaslug, a deadly, new sea-to-air anti-aircraft missile; the stand-off bomb Blue Steel and the Red Top infra-red homing air-to-air missile—all these are developments of Hawker Siddeley. With achievements like these Hawker Siddeley write aviation history in the skies every year.
