

Airstrip? What airstrip?

The P1127 strikes from 45 ft. of rough ground

A strike reconnaissance aircraft flying fast and low. A familiar subject—but with an important difference. The aircraft is a Hawker Siddeley P1127 that has taken off vertically from a small patch of unprepared ground. It can land in a similar space wherever tactics dictate.

A Bristol Siddeley Pegasus vectored thrust engine provides the power for the P1127 which is now under development for the R.A.F.

Hawker Siddeley also make the Buccaneer strike aircraft, the Gnat advanced trainer, the Andover military freighter, the 125 business jet, the 748 prop-jet passenger aircraft, the Trident three-jet airliner, and the Argosy medium range cargo freighter.
